GROUP ASSIGNMENT – UX/UI DESIGN PROJECT

---

1. Assignment Description

Students are required to work in groups of **exactly 5 members** to design a digital product (mobile or web application) that solves a real-world user problem. This project simulates a complete UX/UI workflow, including research, ideation, prototyping, testing, and basic implementation.

The objective is to help students develop both **design thinking** and **technical skills**, while understanding how to transform user needs into practical digital solutions. Students are also encouraged to align their projects with global challenges based on the **Sustainable Development Goals (SDGs)**.

---

2. Suggested Topics (Based on Sustainable Development Goals)

Students are encouraged to select project topics inspired by the **17 SDGs**, for example:

- **No Poverty** → Job-finding or financial support apps
- **Zero Hunger** → Food sharing or waste reduction apps
- **Good Health and Well-being** → Healthcare or mental health apps
- **Quality Education** → E-learning platforms
- **Gender Equality** → Gender support platforms
- **Clean Water and Sanitation** → Water tracking apps
- **Affordable and Clean Energy** → Energy-saving apps
- **Decent Work and Economic Growth** → Recruitment platforms

- **Industry, Innovation and Infrastructure** → Startup/innovation tools
- **Reduced Inequalities** → Support apps for disadvantaged groups
- **Sustainable Cities and Communities** → Smart city apps
- **Responsible Consumption and Production** → Consumption tracking apps
- **Climate Action** → Environmental monitoring apps
- **Life Below Water** → Ocean protection apps
- **Life on Land** → Wildlife/environment protection apps
- **Peace, Justice and Strong Institutions** → Legal support platforms
- **Partnerships for the Goals** → Community connection platforms

These topics encourage students to create solutions with **real-world and social impact**.

---

3. Deliverables

(1) Low-Fidelity Prototype (Figma)

Students must create basic wireframes focusing on layout and user flow. This stage allows quick idea exploration before detailed design.

---

(2) Video of Low-Fidelity Prototype

A short video demonstrating how users interact with the low-fidelity prototype.

Duration: 1–3 minutes

---

(3) High-Fidelity Prototype (Figma)

Students must design a complete UI including colors, typography, and interactions.

Requirements:

- Minimum **100 screens/pages in Figma**
- At least **one complete user flow**

---

(4) Video of High-Fidelity Prototype (Full Demo)

A video demonstrating the full interactive flow of the prototype, including navigation and transitions.

Duration: 2–5 minutes

---

(5) PowerPoint Presentation

Students must present the entire design process, clearly explaining decisions and outcomes.

---

(6) Portfolio (PDF or Website)

A professional UX/UI case study including:

- Problem definition
- User research
- Competitive analysis
- Design process
- Prototype
- Reflection

---

(7) Run Figma on Mobile

Students must demonstrate the prototype running on a mobile device using Figma preview.

---

(8) Sketch and Code Implementation (Required)

Students must include:

- Initial sketches (hand-drawn or digital), AND
- A working UI implementation using:
  - Flutter
  - React Native
  - HTML/CSS

Requirements:

- Minimum **50 screens/pages implemented in code**

- https://drive.google.com/drive/folders/11Sb2ZaU3bGGu7BN3aURguK9wuSqDax5Z?usp=drive_link

---

(9) Video Presentation

Each group must submit a presentation video where **all 5 members participate**.

Duration: 5–10 minutes

---

4. PowerPoint Structure (with Explanation)

Slide 1 – Title

Introduce the project, team members, and overall concept.

Slide 2 – Project Overview

Explain what the product is, who the target users are, and the usage context.

Slide 3 – Problem Statement

Clearly define the problem users are facing and why it matters.

Slide 4 – Goal

Describe the objectives and expected outcomes of the solution.

Slide 5 – User Research

Present research methods and key insights.

Slide 6 – Competitive Analysis (Minimum 20 Applications)

Analyze at least 20 similar applications, comparing features, UI/UX patterns, strengths, and weaknesses to identify opportunities.

Slide 7 – Pain Points

Highlight the main user frustrations identified.

Slide 8 – Persona

Introduce a representative user profile.

Slide 9 – User Journey

Visualize the user’s experience and identify key issues.

Slide 10 – Ideation

Present solution ideas and design directions.

Slide 11 – Low-Fidelity Design

Show wireframes and layout decisions.

Slide 12 – Low-Fi Prototype

Demonstrate the basic interaction flow.

Slide 13 – Usability Testing

Present user feedback and findings.

Slide 14 – Improvements

Explain design refinements based on testing.

Slide 15 – High-Fidelity Design

Present the final UI design.

Slide 16 – High-Fi Prototype

Demonstrate the complete interactive experience.

Slide 17 – Accessibility

Explain how the design supports usability and inclusiveness.

Slide 18 – Mobile Demo

Show the prototype running on a mobile device.

Slide 19 – Code Implementation

Demonstrate the implemented UI and explain how it matches the design.

Slide 20 – Final Result

Summarize the final product and its key features.

Slide 21 – Reflection

Discuss lessons learned and challenges.

Slide 22 – Next Steps

Suggest future improvements or extensions.

Slide 23 – Q&A

Conclude the presentation.

---

5. AI Tools (Figma to Code)

Students are encouraged to use AI tools to convert designs into code:

Design-to-Code Tools

- Locofy.ai – Figma to React, Flutter, HTML
- Anima – Responsive code export
- Figma Dev Mode – CSS inspection
- Builder.io – Automated UI-to-code conversion
- Uizard – AI UI generation

---

6. Grading Criteria

A. UX/UI Process (25%)

- User research (10%)
- Competitive analysis (20 apps) (10%)
- Persona & journey (5%)

B. Design Quality (20%)

- Low-fidelity design (5%)
- High-fidelity UI (15%)

C. Prototype & Demo (15%)

- Interaction quality (10%)
- Video demo (5%)

D. Code Implementation (15%)

- Minimum 30 screens (5%)
- UI accuracy (5%)
- Code structure (5%)

E. Presentation (10%)

- Slide clarity (5%)
- Delivery (5%)

F. Portfolio (10%)

- Structure (5%)
- Visual storytelling (5%)

G. Creativity & SDG Impact (5%)

- Innovation
- Real-world impact

8. Notes

- Groups must have **exactly 5 members**
- Minimum **100 Figma screens**
- Minimum **30 coded screens**
- Competitive analysis must include **real applications**
- Code does not need full functionality but must reflect the design
- Use of AI tools is encouraged
